Position	Qty.	Description
	1	CRN 1S-25 A-FGJ-A-E-HQQE
		Product No.: On request
		Vertical, multistage centrifugal pump with inlet and outlet ports on same the level (inline). Pump materials in contact with the liquid are in high-grade stainless steel. Power transmission is via a rigid split coupling. Pipe connection is via combined DIN-ANSI-JIS flanges.
		The pump is fitted with a 3-phase, fan-cooled asynchronous motor.
		<b>Further product details</b> Steel, cast iron and aluminium components have an epoxy-based coating made in a cathodic electro-deposition (CED) process. CED is a high-quality dip-painting process where an electrical field around the products ensures deposition of paint particles as a thin, well-controlled layer on the surface.
		An integral part of the process is a pretreatment. The entire process consists of these elements: 1) Alkaline-based cleaning.
		2) Zinc phosphating.
		<ul> <li>3) Cathodic electro-deposition.</li> <li>4) Curing to a dry film thickness 18-22 my m.</li> <li>The colour code for the finished product is NCS 9000/RAL 9005.</li> </ul>
		Pump The pump head and flange for motor mounting is made in one piece (cast iron). The pump head cover is a separate component (stainless steel). The pump head has a combined 1/2" priming plug and vent screw.
		The pump is fitted with a balanced O-ring seal unit with a rigid torque-transmission system. This seal type is assembled in a cartridge unit which makes replacement safe and easy. Due to the balancing, this seal type is suitable for high-pressure applications. The cartridge construction also protects the pump shaft from possible wear from a dynamic O-ring between pump shaft and shaft seal.
		<ul> <li>Primary seal: <ul> <li>Rotating seal ring material: silicon carbide (SiC)</li> <li>Stationary seat material: silicon carbide (SiC)</li> </ul> </li> <li>This material pairing is used where higher corrosion resistance is required. The high hardness of this material pairing offers good resistance against abrasive particles.</li> <li>Secondary seal material: EPDM (ethylene-propylene rubber)</li> <li>EPDM has excellent resistance to hot water. EPDM is not suitable for mineral oils.</li> </ul>
		The shaft seal is screwed into the pump head.

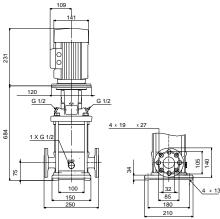

Position	Qty.	Description	
	αιγ.	•	and the second
		The pump has a stainless-steel l	base mounted on a seperate base plate. This base and base plate are the staybolts which hold the pump together. The outlet side of the
		base has a combined drain plug	and bypass valve. The pump is secured to the foundation by four bolts
		through the base plate. The flang	ges and base are cast in one piece and prepared for connection by
		means of DIN, ANSI or JIS.	· · · · ·
		Motor	
			an-cooled motor with principal dimensions to IEC and DIN standards.
		The motor is flange-mounted wit	h tapped-hole flange (FT).
		J J	ccordance with IEC 60034-7: IM B 14 (Code I) / IM 3601 (Code II).
		Electrical tolerances comply with	
		The motor efficiency is classified	as IE3 in accordance with IEC 60034-30-1.
		The motor does not incorporate	motor protection and must be connected to a motor-protective circuit
		breaker which can be manually r rated current of the motor (11/1).	reset. The motor-protective circuit breaker must be set according to the
